Your setup in 8 steps

Rasa Travel Agent Factory · New York · Do the steps in order. Each one is one action.

RASA
Developer Community

0 Bring three things

A laptop with **Chrome**. Headphones with a mic. A **GitHub** account. None? Make one free at `github.com/signup`

1 Get your Rasa licence

Open `rasa.com/rasa-pro-developer-edition-license-key-request`. Fill in the form and send it. It arrives by **email**. Copy the **whole** long string.

2 Get your OpenAI key

Open `platform.openai.com/api-keys`. Click **Create new secret key**. Copy it now: it is shown **once**. Your OpenAI account needs **billing** on.

3 Get your Deepgram key

Open `console.deepgram.com`. Click **Settings**, then **API Keys**, then **Create a New API Key**. Copy the key.

4 Save all three on GitHub

Open `github.com/settings/codespaces`. Under **Codespaces secrets** click **New secret**. Type one name below in **Name**, paste its value in **Value**, set **Repository access** to **RasaHQ/rasa-community-resources**, click **Add secret**. Do this 3 times.

`RASA_LICENSE` · `OPENAI_API_KEY` · `DEEPGRAM_API_KEY`

You should see: *three names in the list. Capitals and underscores exactly as written.*

5 Open the workshop

Scan the code, or open `github.com/RasaHQ/rasa-community-resources` and click **Open the Rasa Travel Agent Factory Codespace**. Check it says **Rasa Travel Agent Factory** and **4-core**. Click **Create codespace** once. Wait until the log says **Travel factory dependencies ready**.

`github.com/RasaHQ/rasa-community-resources`

6 Check your keys

Top menu: **Terminal**, then **New Terminal**. Type `bash desk doctor` and press **Enter**.

You should see: *your three names, each followed by **present**.*

7 Your first win

In the same terminal type `bash desk data fx USD GBP 200` and press **Enter**.

You should see: *the words **converted** and **reference_date**. That is $200 in pounds.*

Stuck?

- Step 6 says a name is **missing**: fix the spelling in step 4, or its **Repository access**. Then open `github.com/codespaces`, click **…** next to your workspace, **Stop codespace**, wait, click its name to open it again, and rerun step 6.
- Anything else: **raise your hand**. Never type a key into chat or a shared screen.
- The host gave you a value? Use it in the matching step instead of getting your own.

Your own OpenAI usage is billed to you.
